Software Engineer (Frontend and Backend Developer)

I specialize in web interface development, with a focus on responsive design and progressive web applications, creating user interfaces using JavaScript, TypeScript, React, Node.js, Next.js, HTML and CSS. Experience in enhancing security through authentication, authorization, data protection and secure client-server communications.

Work History

2022-04
- 2024-04

Software Engineer (Frontend React Developer)
Capgemini

- Professional Experience:
- Work at a multinational company with operations across the United States, Germany, Poland, France, and the United Kingdom. My primary role involved developing security web applications and services for American banks and Capgemini's digital department. I utilized a tech stack comprising JavaScript, TypeScript, React, Redux, Node.js, Next.js, HTML, and CSS.
- Key Contributions:
- Creating responsive designs and progressive web apps tailored for the banking and cryptocurrency sectors. My expertise in enhancing security includes implementing robust authentication, authorization, and data protection mechanisms.

- API Integration and Development: Spearheaded the integration of RESTful APIs using Node.js, Express, and MongoDB. This role ensured seamless communication between client-side and server-side components of our applications, enhancing functionality and user experience.

- Collaboration with Design Teams: Worked closely with designers to implement responsive designs, ensuring a consistent and intuitive user experience across various devices. This collaboration was crucial in maintaining design integrity and usability.

- UI Development from Designs: Translated design layouts from tools like Figma and Photoshop into fully functional application pages. This process involved detailed conversion of visual concepts into coded reality, maintaining fidelity to original design specifications.

- Storybook Implementation: Established a Storybook for the development team, which streamlined component development and testing. This tool significantly improved our development process by providing a sandbox to build and test UI components in isolation.

- Testing and Quality Assurance: Wrote and maintained unit tests for components, ensuring robustness and reliability. Additionally, I was actively involved in testing components to uphold the highest standards of quality.

2008-05
- 2020-04

Manager of foreign economic activity
Azov Cable Company, Berdiansk Ukraine

Management of the Company's Foreign Economic Department

Awards

Achievements

Represented Capgemini at Europe's Largest Hackathon: Acted as the sole developer of the frontend portion for an innovative application, demonstrating exceptional proficiency in frontend technologies. Collaborated closely with the backend team to ensure seamless integration and functionality, showcasing the ability to work effectively under pressure and within tight deadlines.

LinkedIn Cap Star for Capgemini: Honored as a "Cap Star," recognized for outstanding contributions and enhancing company's tech community presence.

Women in IT Award Nominee: Nominated for Capgemini's "Women in IT" award, celebrating notable IT field contributions.

Developed Capgemini's Digital App: Drove the frontend creation of an internal digital application, leveraging modern web technologies for enhanced
